

IN THE CLAIMS:

The text of all pending claims, (including withdrawn claims) is set forth below. Cancelled and not entered claims are indicated with claim number and status only. The claims as listed below show added text with underlining and deleted text with ~~strikethrough~~. The status of each claim is indicated with one of (original), (currently amended), (cancelled), (withdrawn), (new), (previously presented), or (not entered).

Please AMEND claims 1, 8, 15, and 17, CANCEL claims 2 and 9, and ADD new claim 18 in accordance with the following:

1. (Currently Amended) An apparatus for creating purchase information, comprising:
 - an account information input/output section that obtains first purchase information concerning items selected by a first person from an item list provided by an online shopping service via a network;
 - a storage unit that stores the first purchase information obtained by the account information input/output section and stores purchase identification information to uniquely identify the first purchase information;
 - a searching unit that searches the storage unit for the first purchase information corresponding to a search condition received from a second person; and
 - a creation unit that creates second purchase information concerning an item to be purchased by the second person, based on the first purchase information searched, wherein the searching unit searches the storage unit for the first purchase information corresponding to the purchase identification information, which is received from the second person as the search condition.
2. (Cancelled)
3. (Previously Presented) The apparatus according to claim 1, wherein
 - the storage unit further stores person identification information to uniquely identify the second person, and
 - the searching unit searches the storage unit for the first purchase information corresponding to the person identification information, which is received from the second person as the search condition.

4. (Previously Presented) The apparatus according to claim 3, wherein the person identification information includes information to identify the second person as a customer who purchases the item.
5. (Previously Presented) The apparatus according to claim 1, wherein the storage unit further stores item identification information to uniquely identify the item, and the searching unit searches the storage unit for the first purchase information corresponding to the item identification information, which is received from the second person as the search condition.
6. (Previously Presented) The apparatus according to claim 1, wherein the storage unit further stores person identification information to uniquely identify the first person, and the searching unit searches the storage unit for the first purchase information corresponding to the person identification information, which is received from the second person as the search condition.
7. (Original) The apparatus according to claim 6, wherein the person identification information includes information to identify the first person as a supervisor who manages the online shopping service.
8. (Currently Amended) A method of creating purchase information, comprising:
 - obtaining first purchase information concerning items selected by a first person from an item list provided by an online shopping service via a network;
 - storing the first purchase information obtained and storing purchase identification information to uniquely identify the first purchase information;
 - receiving a search condition from a second person;
 - searching the storage unit for the first purchase information corresponding to the search condition; and
 - creating second purchase information concerning an item to be purchased by the second person, based on the first purchase information searched, wherein the receiving includes receiving the purchase identification information, as the

search condition, from the second person, and
the searching includes searching the storage unit for the first purchase
information corresponding to the purchase identification information received.

9. (Cancelled)
10. (Previously Presented) The method according to claim 8, further comprising storing person identification information to uniquely identify the second person, wherein
the receiving includes receiving the person identification information, as the search condition, from the second person, and
the searching includes searching the storage unit for the first purchase information corresponding to the person identification information received.
11. (Original) The method according to claim 10, wherein
the person identification information includes information to identify the second person as a customer who purchases the item.
12. (Previously Presented) The method according to claim 8, further comprising storing item identification information to uniquely identify the item, wherein
the receiving includes receiving the item identification information, as the search condition, from the second person, and
the searching includes searching the storage unit for the first purchase information corresponding to the item identification information received.
13. (Previously Presented) The method according to claim 8, further comprising storing purchase identification information to uniquely identify the first person, wherein
the receiving includes receiving the person identification information, as the search condition, from the second person, and
the searching includes searching the storage unit for the first purchase information corresponding to the person identification information received.

14. (Original) The method according to claim 13, wherein
the person identification information includes information to identify the first
person as a supervisor who manages the online shopping service.

15. (Currently Amended) A computer program product including computer executable
instructions stored on a computer readable medium, wherein the instructions, when executed by
the computer, cause the computer to perform:

obtaining first purchase information concerning items selected by a first person
from an item list provided by an online shopping service via a network;

storing the first purchase information obtained and storing purchase identification
information to uniquely identify the first purchase information;

receiving a search condition from a second person;

searching the storage unit for the first purchase information corresponding to the
search condition; and

creating second purchase information concerning an item to be purchased by the
second person, based on the first purchase information searched, wherein

the receiving includes receiving the purchase identification information, as the
search condition, from the second person, and

the searching includes searching the storage unit for the first purchase
information corresponding to the purchase identification information received.

16. (Previously Presented) The apparatus according to claim 1, wherein
the account information input/output section obtains a plurality of first purchase
information concerning items selected by a first person from a plurality of respective item lists
provided by a plurality of respective online shopping services via the network, and

the storage unit stores the plurality of first purchase information obtained by the
account information input/output section.

17. (Currently Amended) An apparatus for creating purchase information,
comprising:

an account information input/output section that obtains first purchase information
concerning items selected by a first person from an item list provided by an online shopping
service via a network; ~~and~~

a storage unit that stores the first purchase information obtained by the account

information input/output section and stores purchase identification information to uniquely identify the first purchase information; and

a creation unit that creates second purchase information concerning an item to be purchased by a second person, based on the first purchase information obtained, wherein the storage unit is searched for the first purchase information corresponding to the purchase identification information, which is received from the second person as a search condition.

18. (New) A method of creating purchase information, comprising:
 - storing the first purchase information concerning items selected by a first person from an item list provided by an online shopping service via a network;
 - storing purchase identification information to uniquely identify the first purchase information;
 - receiving the purchase identification information as a search condition from a second person;
 - searching for the first purchase information corresponding to the search condition; and
 - creating second purchase information concerning an item to be purchased by the second person, based on the first purchase information searched.
